ASK HUB

PRODUCT REQUIREMENTS DOCUMENT

Version 1.0 | Client Review & Approval

Prepared by: Israel Saviour, Developer

1. Product Overview

ASK Hub is a digital discipleship platform for children, teens, families and churches. The platform supports structured Bible, prayer, devotional and engagement experiences while giving parents and church leaders access only to information appropriate to their role.

The product supports local church ministry and is not intended to replace in-person ministry. Live classes, general chat and unrestricted adult-to-child communication are outside the MVP scope.

2. Product Vision

- Help families support consistent faith engagement between Sundays.
- Provide age-appropriate Bible, prayer and devotional experiences.
- Give churches appropriate tools to organize classes and encourage participation.
- Keep family-owned information private while providing appropriate church-level visibility.
- Provide a scalable foundation for future administration, compliance, analytics and content capabilities.

3. User Roles

Role	Primary responsibility
Parent / Guardian	Manage family, children and family-private activity.
Child	Participate in activities using parent-managed access where applicable.

Teen	Participate through parent-mediated or independent access according to applicable jurisdiction.
Teacher / Chaperone	Support assigned classes and view permitted activity.
Children's Church Lead	Manage classes, teachers and family enrollment.
Pastor / Pastor Nominee	Church oversight and safeguarding/reporting responsibilities.
App Manager	Platform-level administration and controlled safeguarding access.

4. MVP Scope

4.1 Authentication & Family

- Parent registration and authentication.
- Family creation and management.
- Guardian management.
- Child profiles and PIN access.
- Basic teen invitation/independent-login flow where applicable.
- Role-based authorization and family isolation.

4.2 Church & Class Management

- Church setup and church roles.
- Class creation and teacher/chaperone assignment.
- Family/child class association.
- Join-code and approval flow.
- Family can leave one church and join another without losing family-owned history.
- Church-side visibility ends when the family leaves.

4.3 ASK Hub Core

- Scripture Marinade.
- Prayers of a Lifetime, including Praying Together.
- Bible in a Year Quest with weekly video and quiz.
- Devotional / Daily Bible Study.

- Life & Living Prayers with categories, favorites and audio playback.
- Separate Bible Reading experience with chapter progress and book completion.

4.4 Engagement

- Unified ASK Score.
- Activity points based on the approved scoring rules.
- Individual and family streaks.
- Family Jar.
- Aggregate Group Jar without exposing individual family contributions.
- Together Mode with full individual credit for each participating child.
- Predefined parent and teacher nudges/stickers.

4.5 Privacy & Safeguarding

- Deny-by-default role visibility.
- Private devotional reflections for child/family.
- Separate class activity and family directory views.
- Parent/guardian reporting pathway.
- Anonymous reporting option with controlled internal investigation access.
- Defined deletion lifecycle and safeguarding retention exception.

5. MVP Scoring Rules

Activity	Points
Standard prayer step	78
Salvation step	28
Bible in a Year video	10
Bible in a Year weekly quiz	Up to 20
Bible in a Year weekly maximum	50
Completed devotional	78

Equivalent activities receive the same points across age bands. The engagement system should use an activity/score ledger so duplicate or concurrent submissions do not incorrectly award points.

6. MVP Data Visibility

The MVP follows a deny-by-default principle: anything not explicitly permitted to a role is hidden from that role.

Data / capability	Parent	Teacher	Lead / Pastor	App Manager
Own family information	Yes	No	Limited as permitted	Controlled
Child activity	Own family	Assigned class	Appropriate church scope	Controlled
Private devotional reflection	Yes	No	No	Controlled only when required
Family directory	Own family	No	Yes, separate from activity	Controlled
Class leaderboard	No/own context	Assigned class	Appropriate scope	Controlled
Safeguarding report	Submit/view own process	No	Receive/escalate	Controlled investigation

7. MVP Data Lifecycle

- Deletion request immediately removes church-side visibility.
- 0–30 days: recoverable.
- 30–90 days: backend-only.
- 90+ days: permanent purge according to the approved lifecycle.
- Safeguarding investigations may extend retention until the investigation closes.
- Retention periods are global product rules, not church-configurable settings.

8. MVP Technical Architecture

Recommended MVP architecture: a modular TypeScript backend rather than multiple microservices. This keeps the initial system maintainable and cost-effective while preserving clear domain boundaries for later extraction.

- Mobile: Flutter / Dart.
- Backend: TypeScript API.
- Database: PostgreSQL as the persistent source of truth.
- Optional Redis: cache, rate limiting, background jobs, temporary Together Mode state and other high-frequency/ephemeral workloads.
- Object storage: media and file assets.
- Background workers: notifications, scheduled jobs, deletion processing and other asynchronous tasks.
- Cloudflare or equivalent: DNS, SSL, CDN/WAF where appropriate.

Redis is optional for the MVP. It should not be introduced solely to cache profiles if PostgreSQL capacity is sufficient. Managed Redis is an additional recurring cost; PostgreSQL remains the system of record.

9. MVP Delivery Milestones

Milestone	Target	Scope
1. Foundation	31 Aug 2026	Flutter/backend foundation, auth, families, guardians, children, church/classes, roles.
2. Core ASK Hub	10 Sep 2026	Hub, prayers, Scripture Marinade, Life & Living Prayers, score, streaks, Jar, core UI.
3. Bible & Engagement	20 Sep 2026	Bible Reading, Devotional, Bible in a Year, quizzes, Together Mode, nudges.
4. QA & Launch	30 Sep 2026	Church management completion, reporting, security/permission testing, production deployment, Android build and Play Store submission.

10. MVP Launch Acceptance

- Core mobile flows operational.
- Backend/API and PostgreSQL operational.
- Authentication and role permissions tested.
- Family and child isolation tested.
- Core ASK Hub modules functional.
- Bible Reading, Devotional and Bible in a Year functional.
- Scoring, streaks, Jars and Together Mode functional.
- Nudges and reporting functional.
- Production Android build prepared.
- Google Play Store submission package prepared/submitted.

11. Full Build Roadmap

- Advanced family life-stage continuity, including child-to-adult transition and historical continuity.
- Advanced church administration, analytics and leadership dashboards.
- Centralized App Manager content authoring and publishing.
- Expanded safeguarding workflows and investigation lifecycle.
- Jurisdiction-aware age/consent configuration following legal review.
- Advanced data lifecycle, backup/retention handling and auditability.
- Expanded engagement infrastructure, score ledger, analytics and reporting.
- Additional platform capabilities and integrations agreed in a later phase.

12. Explicitly Excluded from MVP

- Live classes or video conferencing.
- General chat.
- Free-text adult-to-child messaging.
- Child-initiated Together Mode.

- AI features unless separately approved.
- iOS App Store launch.
- Advanced Full Build administration and analytics.
- Third-party service subscription costs.
- Content licensing costs not supplied by the client.

13. Infrastructure & Hosting

The MVP includes initial production infrastructure setup and deployment. Ongoing cloud/hosting charges are separate from development.

Component	MVP approach
Application hosting	Managed application/container hosting or appropriately sized VPS.
PostgreSQL	Managed PostgreSQL recommended for production.
Storage	Managed object storage for media/files.
DNS/SSL/WAF	Cloudflare or equivalent where appropriate.
Backups	Automated database backups with defined retention.

For the initial MVP, a simple managed production stack is preferred,The infrastructure can be scaled as usage grows.

14. Commercial Proposal

Milestone/Phase	Amount
1 MVP — Foundation	$375
2 MVP — Core ASK Hub	$375
3 MVP — Engagement, QA & Launch	$750
4 Full Build — Advanced Platform	$1,000
TOTAL	**$2,500**

The $3,500 MVP fee covers development of the Flutter mobile application, TypeScript backend, database implementation, core functionality, testing, production deployment, Android release preparation and Google Play Store submission.

Ongoing VPS/cloud hosting, managed database, Redis, storage, email/SMS, third-party APIs, domain fees, Google Play developer fees and other third-party subscription charges are separate unless expressly included in a later agreement.

15. Scope Change Policy

The approved MVP PRD is the baseline for development. New modules, major workflow changes, major UI redesigns, new integrations, iOS launch, AI functionality or Full Build features are outside the MVP unless separately approved and priced. Bug fixes relating to agreed MVP functionality remain part of the MVP delivery.

16. Client Responsibilities

- Provide/approve brand assets and final content references.
- Provide or approve Bible/ministry content, media and licensing.
- Provide required church information.
- Provide access required for Google Play Store submission.
- Provide timely milestone feedback and approvals.
- Complete required legal/compliance review for applicable launch jurisdictions.

17. Approval

By approving this PRD, the client confirms that the MVP scope represents the functionality agreed for the initial launch, that Full Build capabilities are a future phase, and that the approved MVP scope will be used as the baseline for development and milestone reviews.

Commercial & Infrastructure Update

This section supersedes the earlier commercial figure and establishes the updated ₦3,500,000 total development structure.

Phase	Scope	Amount
Phase 1 MVP	Core production platform, Flutter app, TypeScript backend, PostgreSQL, authentication, family/church/class system, ASK Hub modules, Bible Reading, engagement, scoring, streaks, Jars, Together Mode, nudges, QA, production deployment and Google Play Store submission.	$1,500
Phase 2 Full Build	Advanced administration, App Manager/content publishing, advanced analytics, safeguarding workflows, lifecycle/compliance capabilities, advanced engagement and remaining Full Build requirements.	$1,000
TOTAL	Complete planned ASK Hub development scope.	$2,500

Hosting & Infrastructure

The application will initially use a cost-optimized cloud infrastructure. Hosting will be configured to minimize unnecessary recurring costs during the initial launch period. Actual infrastructure charges depend on usage and the cloud provider's current pricing; no permanent free-tier guarantee is made.

Recommended MVP approach: TypeScript Cloud Functions/backend services, PostgreSQL as the primary application database, managed/object storage for media, and Redis only when actual workload requirements justify it. Redis is not required merely for profile/session caching.

The existing Devotional and Bible-in-a-Year implementation currently uses Firestore only as content storage. Since the new platform requires relational users, families, churches, classes, permissions, activities and engagement data, PostgreSQL is recommended as the primary system of record. Existing content may be migrated from Firestore into the consolidated architecture rather than maintaining Firestore as a second application database.

Ongoing cloud hosting, storage, database, third-party API, messaging and platform subscription charges are separate from the development fee.

Phase 1 is the initial launch investment at $1,500. Phase 2 is the subsequent Full Build at $1,000 following MVP review and approval. The complete planned development value is $2,500.

The MVP will be delivered within 30 days of the agreement date. The post-MVP build will be integrated continuously, with reviews capped at the 60th day.
